

# IEEE PROJECTS 2016-2017

## ABILE TECHNOLOGIES

| <b>Project ID</b> | <b>Project Title</b>  |
|-------------------|---|
| ABLPHP01          | Mitigating Cross-Site Scripting Attacks with a Content Security Policy  |
| ABLPHP02          | A Secure and Dynamic Multi-Keyword Ranked Search Scheme over Encrypted Cloud Data                                     |
| ABLPHP03          | Catch You if You Misbehave: Ranked Keyword Search Results Verification in Cloud Computing                             |
| ABLPHP04          | Conjunctive Keyword Search with Designated Tester and Timing Enabled Proxy Re-Encryption Function for E-Health Clouds |
| ABLPHP05          | Personalized Travel Sequence Recommendation on Multi-Source Big Social Media  |
| ABLPHP06          | Text Mining the Contributors to Rail Accidents  |
| ABLPHP07          | User-Service Rating Prediction by Exploring Social Users' Rating Behaviors  |
| ABLPHP08          | STAMP: Enabling Privacy-Preserving Location Proofs for Mobile Users   |
| ABLPHP09          | EPLQ: Efficient Privacy-Preserving Location-Based Query Over Outsourced Encrypted Data                                |
| ABLPHP10          | Detecting Malicious Facebook Applications   |
